Lili for Life unveils the Lili screen at VivaTech 2025: An innovation promoting professional inclusion

At VivaTech 2025, the must-attend tech event, **Lili for Life** will officially unveil its latest innovation: the **Lili Screen**. Four years after launching its revolutionary lamp - praised by many families and schools - the startup takes a new step forward with this **one-of-a-kind device**.

Technology designed for inclusion and performance

The result of a close collaboration with researchers and two years of R&D, the **Lili Screen** integrates technology that subtly modulates light flicker to enhance reading comfort. This **27-inch, high-resolution ergonomic monitor**, with a simple and discreet design, is specifically created to meet the needs of people with dyslexia, providing:

- A significant reduction in visual fatigue,
- Improved comprehension of complex content,
- Greater focus and increased productivity.

Invisible to colleagues, this technology is activated via a dedicated app that allows for personalized settings, which are then saved and automatically linked to the dyslexic user. When not connected to the LILI app, the screen functions as a **regular professional monitor**, making it perfectly suited to shared or flexible workspaces.

An innovation addressing an often-overlooked or taboo topic

This innovation emerges in a context that is still widely misunderstood or even taboo in France and across Europe.

Although **more than 8% of the population is affected by dyslexia**, conversations with numerous companies reveal a **persistent lack of awareness** in the professional world.

To help shift perceptions, **Lili for Life** has already conducted over **20 awareness initiatives** over the past 12 months—workshops, webinars, and talks—kickstarting an essential conversation.

Revealing the strengths of neurodiversity

Since its creation, **Lili for Life** has promoted an engaged and optimistic vision of dyslexia: not as a limitation, but as a unique strength to be revealed.

By democratizing access to adapted tools, the startup aims to restore confidence in individuals, unlock their potential, and encourage their personal and professional development.

The **Lili Screen** is a **concrete solution**: a **simple, accessible, and customizable technological tool** that strengthens autonomy and efficiency.

With a single motion, users can compare the standard display mode to Lili mode and **immediately perceive the benefits**.

"We are convinced that it is the business world that will know how to promote this uniqueness that is dyslexia - because the strengths of dyslexic employees are the very assets the professional world needs!"

- Bertrand Descours, co-founder of *Lili for Life*

The **Lili Screen** will be presented in preview at VivaTech in June 2025, where **visitors and companies** will be able to discover and test its features.

It will be available for individual purchase at a price of **€490 including VAT**, with **specific offers planned** for companies committed to inclusion.

In April, **Lili for Life** received the **Silver Medal** in the category **"Sustainable and Responsible Workplace: Care, Inclusion, Diversity,"** a distinction that highlights its commitment to a more inclusive and accessible professional world.

This recognition was awarded by a jury made up of companies actively engaged in workplace well-being, including **IPSEN, TORK/ESSITY, CAPGEMINI, COVEA, DEEZER, RADIO FRANCE, and UP COOP**.
